

Landslides cause billions of dollars in infrastructural damage and thousands of deaths every year worldwide.

With crowdsourcing, NASA scientists are building a catalog of landslides so we can be prepared when the next disasters will occur. Become a citizen scientist today and help influence decisions that can save lives and property.

LANDSLIDES @ NASA

Help build the largest global open landslide catalog

Submit new landslide events to our catalog with **Landslide Reporter**.

Add information about where, when, and why the landslide occurred. Your data will be checked by a NASA scientist and added to the catalog, where can guide awareness of landslide hazards and improve scientific modeling and emergency response.

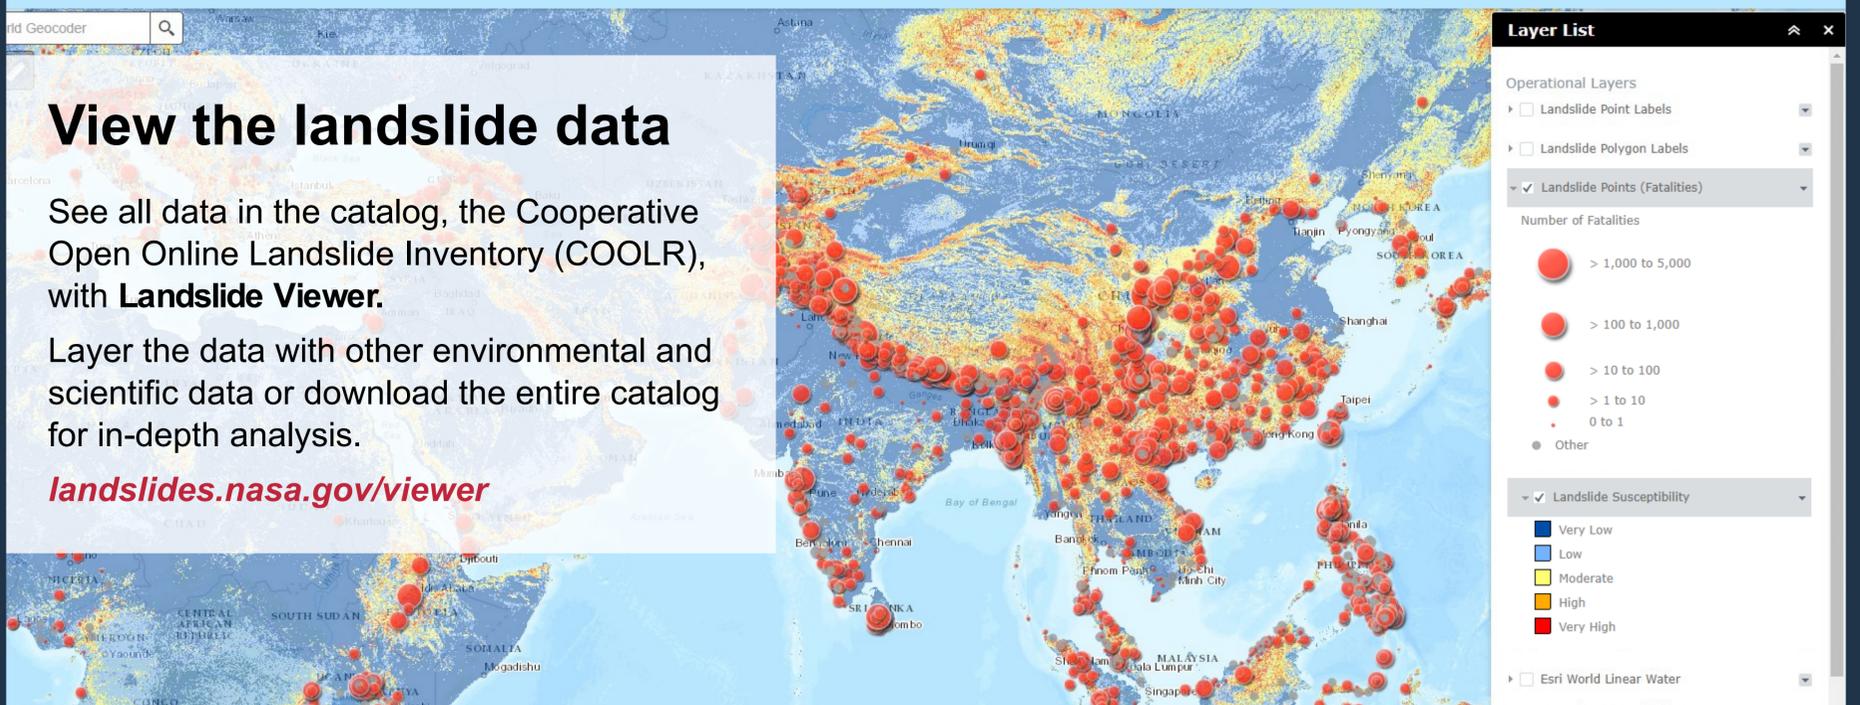

landslides.nasa.gov/reporter

View the landslide data

See all data in the catalog, the Cooperative Open Online Landslide Inventory (COOLR), with **Landslide Viewer**.

Layer the data with other environmental and scientific data or download the entire catalog for in-depth analysis.
